

FREETOWN, Sierra Leone, September 7 (Infosplusgabon) - Half a million people in Sierra Leone will be able to access the life-saving cholera vaccine within weeks, the country's Ministry of Health and Sanitation has announced.

The vaccines will be received from the Gavi-funded global stockpile and will target areas particularly affected by August's floods and deadly landslide, which resulted in over 500 confirmed deaths, The UN Children's Fund has announced.

Hundreds more people were reported missing in the wake of the disaster, according to the Office of National Security, while thousands were displaced from their homes.

"Cholera is a devastating disease which spreads quickly and kills fast, and risks can increase after severe flooding," said Dr. Brima Kargbo, Chief Medical Officer at the Ministry of Health and Sanitation. "The oral cholera vaccine is an important tool to better protect the country and affected communities against the disease, which will ultimately save lives."

Two rounds of vaccination are planned to run from September and will be delivered in 25 affected communities by the Government of Sierra Leone with support from Gavi Alliance, the World Health Organization (WHO), UNICEF, the UK Government and other health partners.

“The devastating floods and landslides which ravaged Sierra Leone throughout August have left the country dangerously vulnerable to water-borne disease outbreaks,” said Dr. Seth Berkley, CEO of Gavi Alliance.

“Access to safe water and sanitation is limited, and the public health system, still recovering after the 2014 Ebola outbreak, is stretched. These lifesaving vaccines, alongside urgent support to improve safe water and sanitation, have the potential to prevent a cholera outbreak before it has the chance to bring more misery to a country that has already suffered enough.”

UNICEF said the decision to send cholera vaccines from the global stockpile was taken quickly on 31st August by the International Coordinating Group (ICG) for Vaccine Provision following the deployment of a WHO specialist to the country. The full quantity of the vaccine (1,036,300 doses for two rounds) is set to arrive in Freetown on Thursday, 7 September through UNICEF's global Supply Division.

WHO recommends that vaccination against cholera be considered in emergencies and other high-risk scenarios where there are increased threats of outbreaks, when combined with standard prevention and control measures for the disease. These measures include readiness to provide adequate testing and treatment, steps to ensure access to safe water and sanitation, and community mobilization to engage the public in preventing infection.

Sierra Leone's last major cholera outbreak, in 2012, killed 392 people and infected more than 25,000 others.

Gavi, WHO, UNICEF and partners are working with the Ministry of Health and Sanitation to help plan and implement the campaign, which will make the vaccine available free-of-cost to disaster-affected populations, while supporting ongoing cholera prevention and preparedness.
